SUBJECT : Telecon with Russ Stokes re Burroughs Equipment Status
on 15 December 1982

Shortly after our discussion this morning re the status of NELO's efforts to obtain two burroughs 6930 systems, Russ called to inquire about the actual ownership of the systems. He was responding to a question from his superior. I stated that under the TRW SAFE contract TRW was authorized to acquire the SAFE hardware with Government funds and for all intent and purposes the hardware became Government-furnished-equipment upon delivery to TRW by the Burroughs Corporation. I stated that he should consider the equipment Government-owned since the terms of the final settlement which includes the final payment on the systems will have been completed prior to his acquiring the systems.

He also inquired as to the timing for his acquiring the systems. I stated that the Government, TRW and Burroughs are currently working the final settlement and all parties want to settle prior to the end of the year, at which time he can ship the systems to the NELO sites.

He also indicated that the NELO letter of intent was being processed at a higher level and that he foresees the letter arriving here by the end of next week.
